

## Simple cost effective transcoding NuFor to OP47 CEA 608 to 708

Microvideo have for over 25 years been market leaders in data insertion, decoding and bridging products. The HDB 300 is the most advanced, flexible and cost effective HD/SD inserter, decoder and data bridge on the market today.

The HDB 300 is Microvideo's flagship data management solution. It allows simultaneous insertions, decoding, bridging, copying and shuffling in real time. A simple web based user interface allows even the most complex setups to be entered and stored.

The HDB 300 replaces over 20 standalone SD inserters, 20 SD decoders and 4 SD Data bridges in 1 Eurocard. With up to 6 Eurocards in a 1U frame, the HDB 300 saves money, rack space and power and allows broadcasters to seamlessly migrate to HD subtitling, cost effectively and utilising their existing systems.

If you want more information on the HDB 300 or any of Microvideo's data management, switching, branding or signal processing modules just click here:

Remember with Microvideo "the answers YES, now what's the question"
