Microvideo Technology Forms KeyPart Of TV Markiza's HD File-Based Format

Venerdì, 09 Gennaio 2009 - 01:50 AM - 3 giorni, 10 Hours ago - top stories - S-Broadcastbuyer

TV Markiza, Slovakia's leading privately owned television station, has purchased a number of MicroVideo INS-VPS (VBI) inserters and HDS 201s bypass switches. These form a key element of the broadcaster's new HD file-based transmission platform. TV Markiza has installed eight Microvideo INS-VPS inserters fitted with an optional analogue data input. This dual purpose solution allows the broadcaster to insert teletext as well as VPS data with a single unit. VPS signaling can be used to carry information regarding the program source, station ident, VTR control, audio soundtrack and parental control. The MicroVideo inserters enable this essential data, such as information regarding the presence of multiple language audio, to be transmitted with the video.
